**Re: Ambient Monitoring Work Plan – Dudley/Northside Elementary School Campus
North Monitoring Station, and South Monitoring Station
Monthly Report (June 1, 2022, through June 30, 2022) High Acres Landfill**

Dear Mr. Walsh:

On April 30, 2019, GHD submitted a Revised Surface Emission Monitoring and Ambient Monitoring Work Plan (Work Plan) to the New York State Department of Environmental Conservation (NYSDEC) for the Waste Management of New York LLC (WMNY), High Acres Landfill and Recycling Center located in Perinton, New York (Facility or Site). This submittal serves to provide NYSDEC with a discussion of work and monitoring activities that occurred during the month of June 2022 at the Dudley/Northside combined campus, North Monitoring Station (NMS), and South Monitoring Station (SMS).

Initial Equipment Installation

GHD has performed continuous hydrogen sulfide monitoring at the Dudley/Northside Elementary School Campus and the North Monitoring Station since November 2019. On October 28, 2021, GHD commenced continuous monitoring activities at the South Monitoring Station. The Acrulog hydrogen sulfide (H_2S) monitoring units are installed at the following locations:

Station Name	Unit Serial Number	Last Calibration Date ¹
School Monitoring Station (School)	180200449	February 3, 2022
North Monitoring Station (NMS)	180200450	April 19, 2022
South Monitoring Station (SMS)	180400520	February 3, 2022

The Acrulog unit, which consists of the monitoring equipment enclosed within a weather shelter, was padlocked to a mounting bracket. The Acrulog unit at the Dudley/Northside School Campus was hung from an apparatus placed on top of the roof. The units at the North Monitoring Station and South Monitoring Station were each installed into the side of a tree. In order to assess whether tampering of the unit has occurred, a camera (Wildgame Innovations Cloak Pro Lights Out Trail Camera) was mounted approximately 20 to 25 feet away from each Acrulog unit. The camera unit is motion activated and will snap a 12-megapixel picture upon

¹ According to manufacturer, a calibration of the instrument should occur every 6 months.

detection of motion (at 15 second intervals). The camera has "night-vision" lenses that allow for pictures to be taken during night-time hours.

Acrulog Data Download

On the mornings of June 2, 2022, June 16, 2022, and July 5, 2022, Mr. Britt Gebhardt visited each of the three monitoring stations. An initial inspection of the monitoring station and the surrounding area was performed. Next, the Acrulog units were linked to a laptop via Bluetooth connection, and the monitoring data was downloaded. After downloading the monitoring data, the connection was terminated, and the Acrulog units were checked to ensure that the equipment was continuing to log samples every 10 minutes.

Summary of Collected Monitoring Data

A preliminary review of the data provides the following:

- Of the total of 4,318 readings taken at the School Monitoring Station, 4,137 were below detection.
 - There were one hundred eighty-one detections at the School Monitoring Station ranging from 3 ppb to 19 ppb. A review of the meteorological data indicated that 135 of the 181 detections occurred when the prevailing wind direction was not from the direction of the landfill. In addition, 176 of the 181 detections occurred during a time period outside of the landfill's operating schedule of 7:00 a.m. to 3:30 p.m. A review of the Weekly NYSDEC Hotline Summary Reports during the month of June (compiled by Barton & Loguidice) indicates that there were no hotline calls made within 1 hour of all 181 detections.
 - During the 17:00 hour on June 22, 2022, the School Monitoring Station detected readings ranging from 12 ppb to 19 ppb with an hourly average of 15.5 ppb. There was a heavy thunderstorm that immediately preceded this period of detections and approximately 1/2-inch of rain fell. The winds also drastically shifted direction during the 17:00 hour on June 22, 2022. For the first half of the 17:00 hour, winds were mainly from the west and northwest directions (the opposite direction of the landfill), while winds were mainly from the south and southeast directions during the 2nd half of the 17:00 hour. During the 17:00 hour, detections were also simultaneously occurring at the North Station and the South Station (detections were simultaneously occurring on both sides of the landfill).
 - Similar to the warmer months of 2018, 2019, 2020 and 2021, an increase in detections at the Dudley School occurred during this time of the year and do not appear to be related to the landfill or landfill activities and are likely due to other sources in the vicinity commonly known to produce H₂S including wetlands, sanitary sewers, and other potential sources.
 - It should be noted that Dudley School is over a mile and a half to the northwest from the High Acres Landfill.
- Of the total of 4,318 readings taken at the North Monitoring Station, 4,314 were below detection.
 - There were four detections at the North Monitoring Station ranging from 3 ppb to 6 ppb. 2 of the 4 detections occurred during the 17:00 hour on June 22, 2022. A review of the meteorological data indicated that 3 of the 4 detections occurred when the prevailing wind direction was not from the direction of the landfill. In addition, all 4 of the detections occurred during a time period outside of the landfill's operating schedule of 7:00 a.m. to 3:30 p.m. A review of the Weekly NYSDEC Hotline Summary Reports during the month of June (compiled by Barton & Loguidice) indicates that of the 4 total detections, 1 occurred within 1 hour of a call logged into the NYSDEC hotline.
- Of the total of 4,318 readings taken at the South Monitoring Station, 4,307 were below detection.
 - There were eleven detections at the South Monitoring Station ranging from 3 ppb to 6 ppb; 6 of the 11 detections occurred during the 17:00 and 18:00 hours on June 22, 2022. A review of the meteorological data indicated that 9 of the 11 detections occurred when the prevailing wind direction was not from the direction of the landfill. In addition, 9 of the 11 detections occurred during a time period outside of the landfill's operating schedule of 7:00 a.m. to 3:30 p.m. A review of the Weekly

NYSDEC Hotline Summary Reports during the month of June (compiled by Barton & Loguidice) indicates that there were no hotline calls made within 1 hour of all 11 detections.

- NYSDEC's ambient standard for H₂S is 10 ppb for a 1-hour average (6 NYCRR Subpart 257-10). There was a single occurrence of a 1-hour average during the reporting period above the 10-ppb threshold (at the School Monitoring Station on June 22, 2022 during the 17:00 hour (see above for full summary)).

Ambient average concentrations of H₂S typically range from 0.11 to 0.33 ppb (Agency for Toxic Substances and Disease Registry (ATSDR) Toxicological Profile for Hydrogen Sulfide and Carbonyl Sulfide).

The raw data for each monitoring station during the period of June 1, 2022, through June 30, 2022, is provided as Attachment 2 to this report.

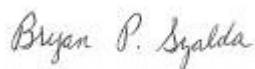

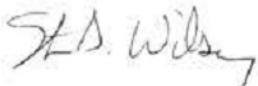

Summary of Landfill Activities

Operational activities occurring during the month of monitoring included the following:

- Leachate extraction
- Operations and maintenance
- Transportation, filling, compaction, and cover of typical volumes of waste received by rail and truck
- Typical volumes of landfill gas extraction and combustion in flare and engine plants
- Composting
- Cell Construction (ongoing)
- Surface emissions monitoring

We appreciate your assistance in this process. We plan to issue reports every month going forward until the completion of work activities. Please feel free to contact us if you have any questions, if you would like any clarifications, or additional information.
