Avon, NY 14414

**Re: Ambient Monitoring Work Plan – Dudley/Northside Elementary School Campus
North Monitoring Station, and South Monitoring Station
Monthly Report (October 1, 2023, through October 31, 2023) High Acres Landfill**

Dear Mr. Walsh:

On April 30, 2019, GHD submitted a Revised Surface Emission Monitoring and Ambient Monitoring Work Plan (Work Plan) to the New York State Department of Environmental Conservation (NYSDEC) for the Waste Management of New York LLC (WMNY), High Acres Landfill and Recycling Center located in Perinton, New York (Facility or Site). This submittal serves to provide NYSDEC with a discussion of work and monitoring activities that occurred during the month of October 2023 at the Dudley/Northside combined campus, North Monitoring Station (NMS), and South Monitoring Station (SMS).

Initial Equipment Installation

GHD has performed continuous hydrogen sulfide monitoring at the Dudley/Northside Elementary School Campus and the North Monitoring Station since November 2019. On October 28, 2021, GHD commenced continuous monitoring activities at the South Monitoring Station. The Acrulog hydrogen sulfide (H₂S) monitoring units are installed at the following locations:

Station Name	Unit Serial Number	Last Calibration Date ¹
School Monitoring Station (School) [10/1-10/2]	180200452	April 4, 2023
School Monitoring Station (NMS) [10/2-10/31]	171000376	September 12, 2023
North Monitoring Station (NMS)	180200449	July 17, 2023
South Monitoring Station (SMS)	180400520	August 10, 2023

The Acrulog unit, which consists of the monitoring equipment enclosed within a weather shelter, was padlocked to a mounting bracket. The Acrulog unit at the Dudley/Northside School Campus was hung from an apparatus placed on top of the roof. The units at the North Monitoring Station and South Monitoring Station were each installed into the side of a tree. In order to assess whether tampering of the unit has occurred, a camera (Wildgame Innovations Cloak Pro Lights Out Trail Camera) was mounted approximately 20 to 25 feet away from each Acrulog unit. The camera unit is motion activated and will snap a 12-megapixel picture upon

¹ According to manufacturer, a calibration of the instrument should occur every 6 months.

detection of motion (at 15 second intervals). The camera has "night-vision" lenses that allow for pictures to be taken during night-time hours.

Acrulog Data Download

On the mornings of October 2, 2023, October 17, 2023, and November 1, 2023, Mr. Britt Gebhardt visited each of the three monitoring stations. An initial inspection of the monitoring station and the surrounding area was performed. Next, the Acrulog units were linked to a laptop via Bluetooth connection, and the monitoring data was downloaded. After downloading the monitoring data, the connection was terminated, and the Acrulog units were checked to ensure that the equipment was continuing to log samples every 10 minutes.

Summary of Collected Monitoring Data

A preliminary review of the data provides the following:

- Of the total of 4,464 readings taken at the School Monitoring Station, 4,464 were below detection.
- Of the total of 4,462 readings taken at the North Monitoring Station, 4,458 were below detection.
 - There were four detections at the North Monitoring Station ranging from 3 ppb to 5 ppb. A review of the meteorological data indicated that 2 detections occurred when the prevailing wind direction was not from the direction of the landfill. In addition, all detections occurred during a time period outside of the landfill's operating schedule of 7:00 a.m. to 3:30 p.m. A review of the Weekly NYSDEC Hotline Summary Reports during the month of October (compiled by Barton & Loguidice) indicates that there were no hotline calls made within 1 hour of any detection.
- Of the total of 4,462 readings taken at the South Monitoring Station, 4,460 were below detection.
 - There were two detections at the South Monitoring Station (both 3 ppb). A review of the meteorological data indicated that both detections occurred when the prevailing wind direction was not from the direction of the landfill. In addition, both of the detections occurred during a time period outside of the landfill's operating schedule of 7:00 a.m. to 3:30 p.m. A review of the Weekly NYSDEC Hotline Summary Reports during the month of October (compiled by Barton & Loguidice) indicates that there were no hotline calls made within 1 hour of any detection.

The on-site meteorological data at the Site for October 1, 2023, through October 31, 2023, is provided in Attachment 1.

NYSDEC's ambient standard for H₂S is 10 ppb for a 1-hour average (6 NYCRR Subpart 257-10).

Ambient average concentrations of H₂S typically range from 0.11 to 0.33 ppb (Agency for Toxic Substances and Disease Registry (ATSDR) Toxicological Profile for Hydrogen Sulfide and Carbonyl Sulfide).

The raw data for each monitoring station during the period of October 1, 2023, through October 31, 2023, is provided as Attachment 2 to this report.

Summary of Landfill Activities

Operational activities occurring during the month of monitoring included the following:

- Leachate extraction
- Operations and maintenance
- Transportation, filling, compaction, and cover of typical volumes of waste received by rail and truck
- Typical volumes of landfill gas extraction and combustion in flare and engine plants
- Composting

We appreciate your assistance in this process. We plan to issue reports every month going forward until the completion of work activities. Please feel free to contact us if you have any questions, if you would like any clarifications, or additional information.
